

# The Commercial Radar That Connects Bonus Spend to Revenue

The promotional and bonus arms race is the single largest discretionary line in your P&L, and most operators run it half-blind. Journii 360 turns every competitor offer, boost, free-bet and free-to-play into structured, MMM-ready intelligence so you can defend margin, win events, and prove the incremental NGR your spend actually delivered.

UK MARKET • SOPV % — SHARE OF PROMOTIONAL VOICE • FEB-APR 2026

**1,000+**

Promotions tracked daily

**21**

UK operators monitored

**13,609**

Events in 60 days

## Four blind spots costing you NGR every week

CMOs, CDOs, CCOs and Heads of Sportsbook & Casino are accountable for promotional ROI, but the data they need doesn't exist inside their own four walls.

### 01. Margin you didn't mean to concede

A competitor boosts the same selection 8% better and quietly pulls volume off you all weekend. By Monday the margin gap is buried in a P&L variance with no name on it.

### 02. Bonus spend without a benchmark

You know what you spent. You don't know whether you were the most generous in market, the least, or mid-pack. So every budget conversation is a debate about gut feel, not standing.

### 03. Event windows you can't replay

Cheltenham, Aintree, the Euros. You can't dissect what each rival activated, when, and which mechanics actually moved the needle. So the same mistakes ship into the next event.

### 04. Attribution that ignores the market

Your MMM tells you what your campaigns did. It doesn't know the market got 30% more generous in the same window, so incremental NGR is overstated or understated accordingly.

### • WHY NOW • WHAT 360 CAPTURED THIS QUARTER

**5,000+**

Boosts captured per month across the UK market

**421**

Active welcome & reload offers monitored monthly

**+91%**

Cheltenham boost intensity vs Aintree window

**1.57x**

bet365 boost value vs Paddy across 30 days

### THE COST OF BEING HALF-BLIND

Bonus and boost spend is the largest discretionary line in your P&L. Running it without a market benchmark means every conversation is opinion, and every variance has no name on it.

**Journii**

# Where Jurnii 360 puts money back on the P&L

## THEME 01 · SHARE OF PROMOTIONAL VALUE

### Know exactly where you stand in the bonus arms race

Promo Richness Index and SoPV quantify generosity across every operator, vertical and event window, turning every promotional debate from opinion into evidence.

- Justify every bonus pound with benchmarked data
- Defend premium positioning or expose inflated SoPV
- Spot market drift early to lead, follow, or hold

SOPV % BY BRAND - UK FEB-APR 2026

## THEME 02 · BOOST MARGIN & MARGIN CONCEDED

### The boost battle is won and lost in tenths of a percent

Monitor exact boost margins every competitor offers and quantify the margin conceded each time you match, beat or hold the line.

- Price boosts with intent and stop reflexive matching
- Detect arbitrage leakage windows as they open
- Concentrate spend where rivals are under-boosting

MEDIAN MC (PP) VS BOOST % - BUBBLE = BOOST COUNT

## THEME 03 · EVENT PERFORMANCE & POST-MORTEMS

### Every major event becomes an institutional asset

Detailed dissection of every major event: what each operator activated, when, which mechanics they used and how strategy evolved hour by hour.

- Replay last year, plan next year by mechanic mix
- Justify event investment with NGR + rivals attached
- Prevent repeat unforced errors across cycles

PROMO MECHANICS · CHELTENHAM VS GRAND NATIONAL 2026

## THEME 04 · INCREMENTAL NGR & MMM ACCURACY

### Stop crediting your campaigns for the market's moves

Pre-formatted competitive data feeds your MMM as market context. Incremental NGR is finally separable from the wave the whole market was riding.

- Explain variance properly in CFO reviews
- Isolate true campaign impact from market shifts
- Defend bonus budget at board level

SOPV SHIFT P1→P2 (PP) · CHELTENHAM TO AINTREE

## WHY IT MATTERS

### Commercial intelligence is decision infrastructure

"Soft week or 30-day price gap?" Every CMO, CDO and CCO is asked this monthly. Without market data the answer is opinion. With Jurnii 360 it's **"bet365 ran 1.57x more boost value than Paddy across 30 days. Customers got better odds elsewhere."**

That's the difference between defending a budget and losing it.

## PRODUCT BENEFITS

### What Jurnii 360 changes on Monday morning

- Quantified SoPV, daily**  
One defensible number replaces opinion in every bonus debate.
- Boost margin alerts**  
Trader spot-checks become structured market signals.
- Structured event post-mortems**  
Slack threads and tribal knowledge become reusable playbooks.
- Live MMM market variables**  
Seasonality proxies replaced with competitive intensity feed.
- Welcome & FTP economics**  
Internal CPA benchmarked against the full market.
- Cross-vertical activation maps**  
Anecdote replaced with mapped patterns by brand.
- Promo Richness Index**  
Intensity scored across operator, vertical and window.
- Arbitrage leakage detection**  
See the windows where sharp customers move volume away.
- Daily refresh, not weekly**  
Decisions made on today's market, not last quarter's.

• THE PLATFORM & THE OUTCOMES

# A modern measurement system for iGaming, live in your stack.

Jurnii 360 is the competitive signal layer of a complete measurement operating system. Daily promo richness, boost margins, welcome-offer economics and event activation across the UK competitive set — piped straight into your MMM, your CRM team and your trading desk.

## WHY GENERIC MMM CAN'T FIND THE GROWTH IN IGAMING

### 01 Promo co-linearity

Bonuses move with marketing, landing inside 'unexplained variance' and corrupting every channel ROI.

### 03 Competitor activity erodes share

Rivals run aggressive offers and your base weakens before your models see it. 360 surfaces it daily.

### 02 Market richness compresses base

A heavy Cheltenham cycle inflates expectations. Without a control variable, your base falls relative to model prediction.

### 04 70–80% sits in 'base'

Generic MMMs can't touch the biggest pool of revenue. Jurnii 360 is the missing context that explains it.

## PROOF IT WORKS: ONE MODEL CYCLE

\$17.1M of annual marketing across 8 channels. Numbers below are what a single MMM programme — with Jurnii 360 as market context — surfaced in its first cycle.

**+46%**

More deposits on the same budget after reallocating \$3M

**3×**

Marketing matters 3× more for new vs blended deposits

**40×**

CPD gap, best vs worst channel (\$8 vs \$326)

**+6%**

NGR uplift on a flat budget in a recent engagement

## WHAT YOU GET ON DAY ONE

### Promo Richness Index

Daily intensity score across operator, vertical and event window.

### Boost Margin Tracker

MC by brand, market and event. Arbitrage windows surfaced.

### Welcome Offer Economics

Internal CPA benchmarked against the full UK market, not vendor reports.

### MMM-Ready Feeds

Pre-formatted competitive variables piped straight into your model.

## RUN A PILOT

**Your brand & two competitors. One event window. First read in days.**
