

◦ GROWTH ENGINE FOR IGAMING

More growth. *Same* marketing budget.

A living measurement programme, powered by Cortex.
Find the growth already hiding in your current spend,
then keep compounding it through continuous testing
and model refinement.

WHY THIS BROCHURE EXISTS

The growth is already *in your budget.*

Most operators could move 10-20% of their current marketing spend into higher-yielding channels tomorrow. They just can't see it. A one-off MMM gives you a snapshot. A **living measurement programme** makes your marketing measurably smarter every quarter. Five principles shape every engagement, each designed to extract more growth from the same marketing pound, and then keep extracting more.

01 · Clarity

One intelligence layer, every team aligned

Cortex ingests every channel, campaign, creative and invoice. On day one, internal teams operate like a hyper-efficient agency, and external agencies plug in with instant visibility rather than monthly status decks.

02 · Diagnosis

Find the growth hiding in your mix

AI-powered modelling, tuned to iGaming economics, quantifies the true incremental contribution of each channel. Out falls a reallocation plan: where to take spend from, where to put it, how much growth that unlocks on flat budget.

03 · Validation

Prove it with tests, every cycle

Recommendations don't become decisions until the market has voted. Geo-holdouts, matched-market lifts and incrementality tests run against every major reallocation, so every move is proven before scale, not after spend.

04 · Compounding

Feed the learning back in, always

Every test result, every promo wave, every UX change, every competitor move becomes a prior in the next model refresh. Year two's model knows things year one's couldn't. You keep extracting growth the competition can't see.

+6%

ROI uplift on a flat budget from a recent operator engagement.

Every *qtr*

New tests in market, new learnings into the model, sharper decisions next cycle.

£1.1B

Global marketing investment the team has previously optimised across 46 brand x country combinations.

THE GROWTH YOU'RE LEAVING ON THE TABLE

iGaming doesn't fit *out-of-the-box* MMM.

The MMM market is crowded with capable tools built for FMCG and retail. They work on supermarket sales against TV, not on cohort NGR against a £50 free bet, a welcome match and an affiliate revshare clause. Six structural reasons iGaming needs a purpose-built approach.

01 · KPI structure

FTDs and NGR don't behave like "sales"

iGaming is high-frequency, low-value behaviour. FTDs are the only true sale-like event; NGR is continuous, built from thousands of small actions and influenced by bonus mechanics, CRM, player luck, margin volatility, wallet liquidity and product mix.

02 · VIP distortion

A handful of players can own the P&L

VIP and HVC players generate disproportionate NGR, and their behaviour does not scale linearly with acquisition volume. Standard MMM assumes linear value scaling. In iGaming that assumption is wrong and leads to systematically incorrect investment decisions.

03 · Promo co-linearity

Your biggest lever is invisible to most models

Bonuses and promotions are the primary competitive lever. If your offer weakens or competitors get aggressive, ROI falls regardless of channel performance. Without structured promo intelligence, bonus-driven headwinds and tailwinds stay hidden inside "unexplained variance."

04 · Regulatory dampening

Sport, marketing and regulation all collide

Marketing concentrates around fixtures that would drive activity anyway. Separating natural demand from true incrementality is the modelling challenge, complicated by simultaneous cross-channel activity and regulatory ceilings that constrain optimisation.

05 · Territories aren't additive

You can't bolt regional models together

Each market has different regulation, channel availability, sporting calendars and restrictions. Territory-level models cannot simply be aggregated into a single global optimisation. Doing so produces materially incorrect macro budget decisions across countries.

06 · Priors over time

The first output is always the least accurate

MMM models aren't self-intelligent. Their accuracy depends on contextual knowledge and priors. Without a continuous test-and-learn loop feeding real experiments back into the model, outputs drift from real market dynamics.

THE ENGINE · CORTEX

The intelligence layer that turns your team *into an agency.*

Cortex is the centralised marketing intelligence layer behind every Jurnii engagement. It gives internal teams the tooling, speed and rigour of a specialist agency, and gives the agencies you already work with a shared source of truth to plan against. One view of spend, creative, tests and outcomes, accessible to everyone who needs it.

Internal team, external agency, or both.

If you run marketing in-house, Cortex gives your team the rigour of an agency without the overhead: planning, taxonomy, reconciliation, creative review and testing all live in one platform. Headcount stops being the bottleneck to analytical maturity.

If you work with external agencies, Cortex becomes the shared intelligence layer between you and them. Same data, same dashboards, same definitions. Status meetings become decisions rather than reconciliations.

OUT

THE ENGAGEMENT

Build. Prove. Scale. *Compound.*

Every engagement is structured so the growth compounds. First we find the waste and the hidden winners. Then we prove every reallocation with a market test. Then we scale what works, and feed the learning back in, so the programme keeps getting sharper quarter after quarter.

STEP 01

See the mix

Cortex ingests every channel, every pound, every campaign from your team and your agencies. Within weeks you have a clearer view than you've ever had.

STEP 02

Find the growth

AI-powered modelling quantifies every channel's true contribution. Media vs promo, VIP vs standard, parity vs real lift. Reallocation plan falls out.

STEP 03

Prove it works

Every major reallocation is validated via geo-holdout or matched-market test through Cortex. The market votes before we scale.

STEP 04

Scale the winners

Proven wins operationalised across markets and brands. Test programme keeps running across promos, creative, channel mix.

STEP 05

Compound forever

Results feed priors. Next refresh structurally smarter than the last. Year two sharper than year one. The gap keeps widening.

THREE DATA LAYERS, ONLY JURNII HAS

Signals your competitors *simply can't see.*

Growth comes from acting on what competitors don't know yet. Three proprietary data layers, each running continuously and each feeding Cortex, give your MMM context that generic tools simply don't have access to.

360

Promo Intel

Automated capture of competitor promo activity. Offer mechanics, timing, creative, all tracked in real time. Promo finally modelled as a measurable variable, not "unexplained variance."

UX

Conversion score

The world's first UX tracking product delivering a consistent conversion score for your platform and competitors, at a frequency modelling can actually use.

BH

Brand health

Bespoke brand tracker (with Disrupt Insight, MRS Best New Venture 2025), modelled as a mediator between media exposure and commercial outcomes. Captures brand-to-deposit lag.

WHY 360 IS ESSENTIAL TO MMM

Only Jurnii can see *this much* of the market.

A worked example from spring 2026. Two of UK racing's biggest festivals, back-to-back. Both huge revenue weeks for every operator. But the promotional intensity was not even close, and without 360, that variance ends up inside your model as "unexplained."

Cheltenham was nearly twice as rich per race as Aintree.

Across Cheltenham 2026 (10–13 March, 28 races), Jurnii 360 captured **775 racing offers** across the top UK operators, including 609 individual price boosts. Four weeks later at Aintree (9–11 April, 21 races including the Grand National), the same tracking picked up **381 racing offers** and 239 boosts.

Per-race, Cheltenham ran at 21.8 boosts versus Aintree's 11.4. **Same operators, same customers, four weeks apart, 91% more promotional intensity.** Midnite led Cheltenham boost volume with 132; bet365 led Aintree with 55. Two completely different competitive postures against events that looked, from the outside, broadly equivalent.

WHAT THIS MEANS FOR YOUR MMM

Any model run through Cheltenham without a market-richness control would systematically underweight media ROI and overweight promo ROI for that fortnight. Running Aintree with those priors misreads incrementality in the opposite direction. **Jurnii 360 is the only source** that captures this context at the daily, per-race, per-operator grain the model actually needs.

CASE STUDY · MULTI-TERRITORY OPERATOR, SPEND MASKED

\$17.1M of media. *One question:* is it working?

A multi-territory operator came to us with \$17.1M of annual marketing investment spread across 8 channels and multiple vendors. The CFO wanted proof each dollar was earning; the CMO wanted to know where to push harder. Vendor reports answered neither question. A purpose-built MMM did.

TOTAL SPEND

\$17.1
million

SCOPE

8+
channels

WINDOW

15
months

OUTCOME

+46%
deposits

VIEW 1 · ALL DEPOSITS

80%

of deposits happen without marketing

Existing customers are habitual. They come back on major event days regardless of whether they saw an ad. Marketing adds ~20% on top.

VIEW 2 · FIRST-TIME DEPOSITS

58%

of new customers are driven by marketing

New customers don't find you by accident. Cut marketing and deposits dip 20%, but new customer acquisition collapses by 58%. Growth depends on spend.

◦ THE KEY INSIGHT

Marketing matters 3x more for growth than for revenue. A channel that looks great at driving deposits from existing customers can be terrible at finding new ones, and vice versa. Without the model, you cannot see which is which, and budget decisions made on blended ROAS systematically starve the acquisition pipeline.

WHAT THE MODEL SURFACED

A 40× gap the vendor reports *never showed*.

One single MMM view, all channels benchmarked like-for-like. Two channels earned scale, one was burning 28% of budget at 0.05× ROAS.

CHANNEL	SPEND	\$ / DEPOSIT	ROAS	ACTION
CTV CONNECTED TV	\$1.14M	\$8	2.04×	SCALE
Sponsorship TEAM & LEAGUE PARTNERSHIPS	\$2.11M	\$10	1.65×	SCALE
Radio TERRESTRIAL	\$0.75M	\$25	0.62×	TEST
Display PROGRAMMATIC	\$1.43M	\$36	0.44×	REVIEW
Influencer	\$2.47M	\$45	0.35×	REVIEW
DOOH DIGITAL OUT-OF-HOME	\$3.23M	\$56	0.28×	TEST
PR / other	\$1.11M	\$64	0.25×	REVIEW
Podcast 28% OF TOTAL BUDGET	\$4.85M	\$326	0.05×	CUT

◦ THE \$4.85M QUESTION

Podcast was the biggest line in the budget at 28% of total spend, yet ranked **dead last** on deposit efficiency (\$326 per deposit, vs \$8 for CTV). Vendor reports never flagged this because they never had comparisons. Only a system view surfaces it.

Net deposits
46% more on
same budget

Honest caveat. Linear extrapolation overstates real-world gains because channels saturate. We recommended testing the reallocation in \$500K tranches, each validated by geo-holdout before the next. This is why MMM output alone is insufficient. The testing programme is what makes the growth bankable.

START UNLOCKING GROWTH

The growth is *already* in your budget. **Let's find it.**

A scoping call covers your data readiness, where the growth is most likely hiding in your current mix, and the compounding gains of running a programme rather than a project. No obligation, no boilerplate deck.

WHAT YOU GET WITH JURNII GROWTH

- + **A diagnosis you can act on.** AI-powered mix modelling, tuned to iGaming economics, identifies where growth is hiding in your current spend.
- + **A plan with proof.** Every major reallocation validated by geo-holdout or matched-market test before scaling, with the market voting first.
- + **One source of truth.** Cortex, the centralised intelligence layer ingests every channel, campaign, creative and invoice. Internal and external teams working from the same data.
- + **A compounding advantage.** Every test result, promo wave, UX change and competitor move feeds priors. The model gets structurally sharper every quarter.
- + **No lock-in.** Production-ready code, models and pipelines delivered into your warehouse. The IP is yours, forever.
- + **The team behind it.** 15+ years of operator-side leadership (DAZN, Betfair, Entain) including £1.1B of marketing investment optimised across 46 brand × country combinations.
