

UX

COMPETITIVE EXPERIENCE INTELLIGENCE

Your UX. Your rivals'. One platform.

The world's first always-on platform that scores every customer journey — yours and all your competitors' — benchmarked across 400+ industry-specific data points, weekly.

- ✓ **Full competitor visibility** — score every rival's UX, UI and CX side by side, not just your own
- ✓ **Journey-level analysis** — registration, deposit, finding bets, bonuses: millions of £ of recoverable revenue in each
- ✓ **Severity-rated recommendations** — specific, actionable fixes for your own site, prioritised by impact
- ✓ **Continuous CX score for MMMs** — UX improvements now measurable as a variable in econometric models, for the first time commercially
- ✓ **99% faster than traditional UX audits** — months of research reduced to minutes

CLIENT VOICES

"I am blown away by the volume and richness of the report Jurnii provides. A really powerful tool that gave me a 'first time using ChatGPT' feeling."

David Cox — CX Consultant

"This kind of report would have taken three months to generate via usual research processes."

Ryan Schembri — CPO, Betsson

LIVE EXAMPLE: ENTRY & HOMEPAGE JOURNEY SCORES — 7 OPERATORS

Sky Bet scored against its competitive set (scores out of 100)

Industry avg overall journey score: **62.5** · Sky Bet ranked 2nd of 7

TRUSTED BY

LeoVegas

ComeOn!

Betsson

Paddy Power

Sky Bet

Tombola

Unibet

Evoke

ITV

FDJ

Every journey scored.
Every competitor too.

Jurnii UX maps and scores all critical customer journeys — registration, deposit, finding bets, bonuses, and more — across your brand and every key competitor. See exactly where you lead, where you lag, and the specific fixes that move the needle.

Deposit and registration journeys: millions of £ of recoverable revenue.

With industry average journey scores sitting at 62.5, the gap between median and best-in-class is commercially significant. A 5-point uplift on a deposit journey translates directly to improved conversion — and that improvement is now trackable over time, weekly, as a continuous signal.

JOURNEY SCORE MATRIX — SKY BET VS 6 COMPETITORS (LIVE JURNII UX DATA)

Journey	Sky Bet ★	bet365	Wm Hill	Betway	Paddy Pwr	Ladbrokes	Betfair	Mkt Avg
Overall score	79	80	78	73	79	73	75	62.5
Entry & Homepage	84	91	86	70	88	79	69	
Registration	79	80	77	82	80	81	80	
Depositing	68	72	79	70	70	70	69	
Finding bets	77	80	87	72	74	68	72	
Placing bets	89	82	77	78	85	70	83	
Bonuses & promos	75	79	85	72	75	75	75	
Getting help	70	85	70	67	72	67	70	

EXAMPLE INSIGHTS & RECOMMENDATIONS — SKY BET HOMEPAGE JOURNEY

HIGH SEVERITY

Betting content (matches and odds) appears below the fold on initial load, delaying engagement from the first screen.

Fix: Surface at least one live or upcoming market above the fold. Reduce header size to bring core content up the page.

MEDIUM SEVERITY

Navigation mixes sports and casino products in the same layer — friction for users with a clear betting intent.

Fix: Separate sports and casino into distinct navigation groups with clear visual hierarchy to reduce decision friction.

MEDIUM SEVERITY

No "Most Popular" or "Trending" events module — new users face decision paralysis with no social proof to guide first bets.

Fix: Introduce a prominent trending bets module near the top to leverage social proof and reduce drop-off.

99%

Reduction in time vs traditional manual UX audit processes

GROUNDBREAKING MEASUREMENT CAPABILITY

CX improvements. Now *measurable* in your MMM.

Jurnii's continuous weekly UX score is the first structured, high-frequency signal that econometric models can use to attribute base revenue movement to experience changes. Previously this variable was commercially unviable to track. Now it's live, weekly, and ready to feed your measurement stack.

WHY UX BELONGS IN YOUR MMM SIGNAL LAYER

● UX moves base revenue

70–80% of iGaming revenue sits in MMM 'base'. Platform UX changes affect FTD conversion, LTV and retention — all base revenue, not channel revenue.

● Competitor UX shifts your market benchmark

When a rival launches a better mobile experience, the market's conversion benchmark moves. Your relative base weakens before marketing teams notice.

● CX improvements compound over time

Better experiences reduce churn and increase reactivation — longitudinal base effects that campaign-level reporting completely misses.

LIVE AT FLUTTER UK&I

Jurnii UX is already deployed as a measurement signal at Flutter UK&I — delivering 1,000+ weekly data points as a continuous input alongside Jurnii 360 promotional intelligence.

PLATFORM USE CASES

01 Problem discovery

Proactively surface UX friction points without surveys, heatmaps, or analytics deep-dives. Always-on, always current.

02 Measure the impact of product fixes

Track whether specific UX or product changes actually improve the experience over time. Close the loop on every improvement.

03 Instant competitor benchmarking

A side-by-side view of where you under- or over-perform vs every key competitor — in minutes, not months.

04 Compare experience across brands & markets

Unified view for multi-brand or multi-market businesses showing where experience excels or slips across your full portfolio.

05 Competitive intelligence tracker

Live alerts on competitor UX changes and new features — so you see market shifts before they appear in your data.

06 Market entry & new vertical analysis

Analyse competitor experience standards and journey expectations before launching in a new market or vertical.

"UX affects LTV and retention directly. Journey effectiveness determines how much of the acquired base activates and returns. That's base revenue, not channel revenue — and CX improvements compound over time in ways campaign-level reporting completely misses."
